**College of Staten Island**

### LANGUAGES

HTML & CSS

Javascript | React.js

Python

### PROFILE

I am a Front-End Developer and Digital Marketing Enthusiast with experience in building user-focused, intuitive web interfaces using HTML, CSS, JavaScript, and React.js. My expertise extends beyond development, blending my passion for digital marketing, creative content, and user experience to drive brand visibility and engagement. I thrive in start-up environments where I can contribute to both engineering and marketing efforts, using SEO, API integration, and UX/UI strategies to craft impactful solutions that resonate with audiences and elevate brands.

### PROJECTS

#### Weather App

SheCodes

Here we have a weather app built using HTML, CSS, and Javascript. How it works: Put any city, state and/or country in the search engine and it will give you accurate forecast data for the week including the current forecast. Click on the "My Location" button to display the temperature for your current location.

#### World Clock

SheCodes

Here we have a world clock created using HTML, CSS & Javascript that displays the time and date for different cities in different countries in Africa. However there is a drop down menu that displays the date and time for different cities all around the world.

#### Travel Website

SheCodes

This is a landing page I created showcasing one of the top cities I would like to visit. It showcases a hero heading, cards, as well as embeded content and pictures. I coded this website using HTML, CSS and it is responsive.

#### Recipe Generator

SheCodes

I developed an AI-powered recipe generator using HTML, CSS, and JavaScript. This project allows users to input a dish, cuisine, or ingredient, and it generates a customized recipe instantly. The integration of AI enhances the user experience by providing diverse and creative recipe options.
